To,

The Admission Committee, University of Hildesheim

Subject: Letter of Motivation for the MSc in Data Analytics

My name is Zeeshan Siddique. I am writing to apply for the Master's program in Data Analytics at the University of Hildesheim. This program focuses on the interdisciplinary field of data analytics, covering advanced mathematical modelling and big data technologies, which will help me bridge the gap between theoretical AI research and practical industry applications. I believe this program will provide me with skills in statistical modelling, big data computing, and machine learning, and that's why I want to join this course.

I completed my Bachelor of Science in Artificial Intelligence at Pak-Austria Fachhochschule Institute of Applied Sciences and Technology (PAF-IAST), where I studied courses like Linear Algebra, Probability & Statistics, Machine Learning, and Big Data Analytics. These courses gave me a strong understanding of the mathematical foundations and computational frameworks required for modern data science. During this degree, I worked on the "AI-Driven Automotive Front Bumper Design Generation" project. This project taught me how to implement Generative Adversarial Networks (GANs) using PyTorch and Open Cascade to automate complex engineering tasks. This experience developed my interest in Generative AI and predictive modelling, and now, I want to further advance in this field by pursuing a Master's program.

In addition to my studies, I have also gained practical experience through projects and internships. I interned at Chohan Technologies, where I was responsible for developing web-based applications and managing relational databases. This internship taught me a lot and gave me practical skills in SQL, CRUD operations, and REST APIs, which are essential for managing the data pipelines used in analytics. These experiences helped me improve my technical skills in Python and data management. I also learned to work in a team and solve technical problems in a fast-

paced environment, alongside participating in research training at the National Centre for Physics (NCP).

The reason I am very interested in the Data Analytics program at the University of Hildesheim is because it offers a highly specialized curriculum that balances research with industry-relevant applications and maintains a strong focus on interdisciplinary problem-solving. I am interested in its modules such as Machine Learning, Big Data Analytics, and Optimization. These modules will equip me with the necessary skills in handling massive datasets and refining algorithmic efficiency. Another reason I want to join this course is its connection to the Information Systems and Machine Learning Lab (ISMLL) because I am eager to learn from experts who are pushing the boundaries of predictive analytics. Now, I want to contribute to the ongoing work in this area by applying my background in AI to solve complex data challenges.

My long-term career goal is to work in data research and industrial AI development. I have always been interested in using Generative AI to optimize industrial processes, and my educational project on automotive design was my first step toward this ambition. I want to work in roles that allow me to design resource-efficient machine learning models that can be deployed in real-world scenarios. This Master's program in Data Analytics will help me to reach these goals by providing the advanced statistical training I currently need.

I am very excited about joining the academic community at the University of Hildesheim. My educational background in Artificial Intelligence, my practical experience with deep learning frameworks, and my passion for data science make me a strong candidate for the MSc in Data Analytics. Thank you for considering my application.

Yours sincerely,

Zeeshan Siddique
